be preserved.
                                                                                                                                                                             (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 62 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
                                                                                                                                                                                                                                                      NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/cenbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently
consists of 41 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       LOCUS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 JOURNAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one MI3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP SMISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 13, constructed by the Sanger Centre Chromosome 13 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr13 RP11-562E17 is from the library RPCI-11.2 constructed by the group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sections only once, except for a short overlap. The true right end of clone RP11-562E17 is at 1 sequence. The true right end of clone RP11-217F
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with corresponding to the overlapping clone, as we submit sequences with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                On Sep 14, 2001 this sequence version replaced gi:15131959. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IMPORTANT: This sequence is not the entire insert of clone RP11-562E17 It may be shorter because we sequence overlapping
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RP11-562E17 is from the library RPCI-11.2 constructed by the group of Pieter de Jong. NOTE: This is a "working draft" sequence. It currently
consists of 59 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         as soon as it is available be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                             IMPORTANT: This sequence is not the entire insert of clone RP11-513115 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone RP11-513115 is at 1 in this sequence. The true left end of clone RP11-187N21 is at 149829 in this sequence. The true right end of clone RP13-459B11 is at 22924 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              on Jul 25, 2001 this sequence version replaced g1:14626095. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequence.

AL Submitted (01-AUG-2000) Sanger Centre, Hinxton, Cambridgeshire, CBH0 18A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Jul 23, 2000 this sequence version replaced gi:9368089.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 SerLeuArgSerAlaHisLeuAla

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   inducing significantly stronger immune responses against vaccine antigens than conventional DNA vaccines, and are also capable of inducing systemic tolerance. This sequence represents the Eschericali heat labile enterotoxin sub-unit A that up-regulates CAMP LE The enterotoxin is an immunoregulatory molecule useful in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 active component such as adjuvants, immunoregulatory peptides and proteins, antisense RNAs, and catalytic RNAs. The co-expression DNA vaccines are useful for vaccinating animals against viral, bacterial and parasitic pathogens, for enhancing immune responses, for inducir systemic tolerance, and for treating and/or preventing Tat-mediated immune deviation. The co-expression DNA vaccines are capable of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes a new DNA vaccine comprising a region encoding an antigen component and a region encoding at least one biologically

This plant-codon optimized cDNA encodes a synthetic Escherichia coli heat-labile toxin (LT) A subunit (LT-A). The sequence contains plant-preferred codons and eliminates sequence motifs associated with spurious mRNA processing. A single codon insertion (GTG encoding valine) was made to accompdate the creation of a NcoI restriction site around the initiator methionine codon. Novel polynucleotides encode a mutant LT-A polypeptide or a mutant Vibrio cholerae cholera toxin (CT) A subunit (CT-A) polypeptide, which have reduced enzyme activity as compared to the

The polynucleotide further comprises a nucleic acid sequence encoding LT B subunit (CT-B) or a CT B subunit (CT-B). The polynucleotides are useful for the transformation of plant cells for the production of transgenic plants to produce edible vaccines, especially oral vaccines in transgenic plants for the production of treatment against E. coli or V. cholerae. The mutant polypeptides are also useful as adjuvants.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                a CT B subunit (CT-B). The polynucleotides are useful for the transformation of plant cells for the production of transgenic plants to produce edible vaccines, especially oral vaccines in transgenic plants for the prophylactic or therapeutic treatment against E. coli or V. cholerae. The mutant polypeptides are also useful as adjuvants. Note: This sequence does not appear in the specification. It was constructed from the wild type LT-A cDNA shown in AAA51106 which is given in Figure 1 of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               spurious mRNA processing. A single codon insertion (GTG encoding valine) was made to accomodate the creation of a NcoI restriction site around the initiator methionine codon. Novel polynucleoties encode a mutant LT-A polypeptide or a mutant vibrio cholerae cholera toxin (CT) A subunit (CT-A) polypeptide, which have reduced enzyme activity as compared to the wild-type LT-A or CT-A polypeptide and where at least one compared to the wild-type LT-A or CT-A polypeptide and where at least one

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           mature protein at residue 192. The sequence contains plant-preferred CC codons and eliminates sequence motifs associated with spurious mRNA processing. A single codon insertion (GTG encoding valine) was made to accomodate the creation of a NcoI restriction site around the codon intiator methionine codon. Novel polynucleotides encode a mutant LT-A colory peptide or a mutant vibrio cholerae cholera toxin (CT) A subunit (CT-A) polypeptide, which have reduced enzyme activity as compared to the wild-type LT-A or CT-A polypeptide and where at least one of the codons is altered to a plant preferred codon. The polynucleotide further CC comprises a nucleic acid sequence encoding LT B subunit (LT-B) or a CT B subunit (CT-B). The polynucleotides are useful for the transformation of plant cells for the production of transgenic plants to produce edible vaccines, especially oral vaccines in transgenic plants for the production of the mutant polypeptides are also useful as adjuvants.

Note: This sequence does not appear in the specification. It was constructed from the wild type LT-A cDNA shown in AAA51106 which is constructed from the wild type LT-A cDNA shown in AAA51106 which is

                                                                                                                                                                                                                                                                                                                                                                                                                            Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a gene encoding a protein having a subunit structure of IA5B in which the DNA sequence encoding each signal is deleted from the A subunit gene and the B subunit gene and they are combined tandemly in the order of (B subunit gene)-(SD sequence gene)-(A subunit gene). A method is provided for the preparation of a protein having a subunit structure of IA5B in which the above DNA is connected to a vector expressible in Brevibacillus chosinensis and Brevibacillus chosinensis is transformed by said vector and said transformant is cultured. The protein can be used in the preparation of an adjuvant for vaccine. The present sequence represents the E. coli mutant heat-labile toxin (mLT) 5B-SD-1A protein encoding DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (DOKU-) DOKURITSU GYOSEI HOJIN NOGO

A method is provided for the preparation of a protein having a subunit structure of 1A5B in which the above DNA is connected to a vector expressible in Brevibacillus chosinensis and Brevibacillus chosinensis is transformed by said vector and said transformant is cultured. The protein can be used in the preparation of an adjuvant for vaccine. The present sequence represents the E. coll heat-labile toxin (LT) 5B-SD-1A protein encoding DNA.

The control groups received phosphate buffered saline (PBS) alone. The serum and faecal antibody titres to LT were determined. The results showed that mice immunised with LTS63Y or LTdell10/112 contained high and comparable level of anti-LT antibodies in sera and faecal extracts compared with those immunised with wild-type LT. The LT mutants are useful as a vaccine for preventing and treating diarrhoea and as an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                are two novel detoxified and immunologically active proteins (LT mutants) derived by site-directed mutagenesis of the Al subunit of wild type LT. The substitution of Ser to Tyr at position 63 in LT8637 blocks NAD-binding. Deletion of Glu residues at positions 110 and 112 in LTde1110/112 eliminate the enzymatic activity of LT. The Al subunit of wild type LT catalyses ADP-ribosylation of Gs, a GTP-binding protein the regulates CAMP levels. The resulting increase in CAMP is the cause of diarrhoea in humans and animals e.g. pigs. The mucosal immunogenicities of mutant heat-labile endotoxins LT8637 and LTde1110/112 were tested.
                                                                                                               Escherichia Synthetic.

The present sequence encodes for Escherichia coli heat-labile centerotoxin (LT) mutant LTS63Y and LTG61110/112 (AAU00507) CC are two novel detoxified and immunologically active proteins (LT mutants) derived by site-directed mutagenesis of the A1 subunit of wild type LT. The substitution of Ser to Tyr at positions 110 and 112 in CC (Togel110/112 eliminate the enzymatic activity of LT. The A1 subunit of CC (Togel110/112 eliminate the enzymatic activity of LT. The A1 subunit of CC (Togel110/112 eliminate the enzymatic activity of LT. The A1 subunit of CC (Togel110/112 eliminate of CC (Togel110/112 elim for antibody production. that

Heat-labile toxin; LT-A; LT-B; mutant; transgenic plant; vaccine; adjuvant; anti-bacterial; ss. oral;

Escherichia coli

CC Oligonucleotide 40-mers (AAA51107-26) spanning the entire synthetic CC Escherichia coli heat-labile toxin (LT) A subunit (LT-A) coding sequence CC and a set of complementary 40-mers (AAA51127-46) that centre on the CC junctions of the coding oligomers allowing 20 bp overlaps were obtained CC commercially and used to construct the synthetic LT-A cDNA. The sequence CC contains plant-preferred codons and eliminates sequence motiffs CC encoding valine) was made to accommodate the creation of a Ncol CC encoding valine) was made to accommodate the creation of a Ncol CC entriction site around the initiator methionine codon. Novel CC cholerae cholera toxin (CT) A subunit (CT-A) polypeptide or a mutant Vibrio CC cholerae cholera toxin (CT) A subunit (CT-B) olypeptide, which have CC polypucled and where at least one of the codons is altered to a plant CC polypeptide and where at least one of the codons is altered to a plant CC preferred codon. The polypucleotide further comprises a nucleic acid conjuncted codon. The polypucleotide further comprises a nucleic acid conjuncted or CT B subunit (CT-B). The CC polypucleotides are useful for the transformation of plant cells for the production of transgenic plants for the prophylactic or therapeutic CC creatment against E. coli or V. cholerae. The mutant polypeptides are conserved as adjuvants. (BOYC-) BOYCE THOMPSON INST PLANT RES (MASO/) MASON H S. (ARNT/) ARNTZEN C J. Chem., 259, 5037-5044 - see AAQ42768) was subjected to site-directed mutagenesis. Certain mutations were found to reduce toxicity (see AAQ51314-Q51326). The invention relates to immunogenic, detoxified LT-A proteins and their use in vaccines to protect against enterotoxigenic E.coli. Sequence AAQ51315 is a combination of the wild-type coding sequence and the mutagenic primer sequence used to introduce the preferred mutation. (Amino acid numbering is based on the cholera toxin A subunit sequence).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The wild-type sequence coding for the A subunit of the heat labile toxin (LT-A) of a strain of E.coli known to affect humans (Yamamoto et al, J.Biol. Chem., 259, 5037-5044 - see AAQ42768) was subjected to site-directed mutagenesis. Certain mutations were found to reduce toxicity (see AAQ51314-Q51326). The invention relates to immunogenic, detoxified LT-A proteins and their use in vaccines to protect against enterotoxigenic E.coli. Sequence AAQ51316 is a combination of the wild-type coding sequence and the mutagenic primer sequence used to introduce the preferred mutation. (Amino acid numbering is based on the cholera toxin A subunit sequence).
                                                                                                                                                       enterotoxigenic bacteria; vaccine; immunogenic protomer A; site-directed mutagenesis; reduced ADP-ribosyltransferase activity; ss.

    useful as vaccines against infection
enterotoxin producing Escherichia coli

Chem., 259, 5037-5044 - see AAQ42768) was subjected site-directed mutagenesis. Certain mutations were found to reduce toxicity (see AAQ51314-Q51326). The invention relates to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       immunogenic, detoxified LT-A proteins and their use in vaccines t protect against enterotoxigenic E.coli. Sequence AAQ51317 is a combination of the wild-type coding sequence and the mutagenic primer sequence used to introduce the preferred mutation. (Amino acid numbering is based on the cholera toxin A subunit sequence).
                                                                                                                                                                                                                                                                                                                                                                        enterotoxigenic bacteria; vaccine; immunogenic detoxified protomer A; site-directed mutagenesis; reduced toxicity; ADP-ribosyltransferase activity; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 3; Fig 2 and Page 46; 60pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           enterotoxin producing Escherichia
